

# efx

## Next generation factoring

Your first choice solution for scalable growth.

Experience that pays off:  
efcom has over 20 years  
of industry know-how.

efcom   
The Standard of Factoring Software

# On-premise or cloud-based factoring software: Makes you flexible right from the start.

## 1 Maximally scalable

Whether you are a start-up, an independent factor or a major bank: with efX you get the solution package that suits you best. Billing is per use—if your business grows, the application can be expanded. Decide together with us on one of the sizes offered.

## 3 State-of-the-art technology

We use the latest technologies: artificial intelligence, machine learning, distributed ledger technology (blockchain). These are used, for example, to automate processes or effectively prevent fraud.

## 4 Performance

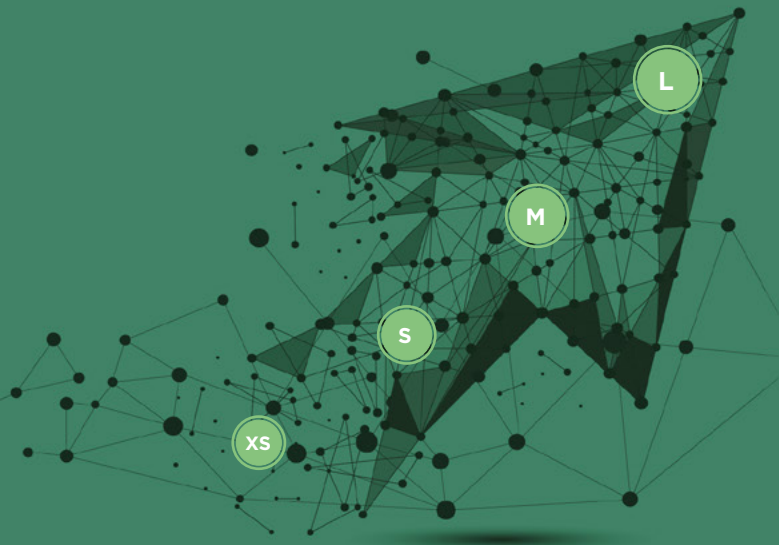

Our solutions are designed from the ground up to provide the best possible support for mass data processing. This means that, no matter how much data you need to process, you can rely on us.

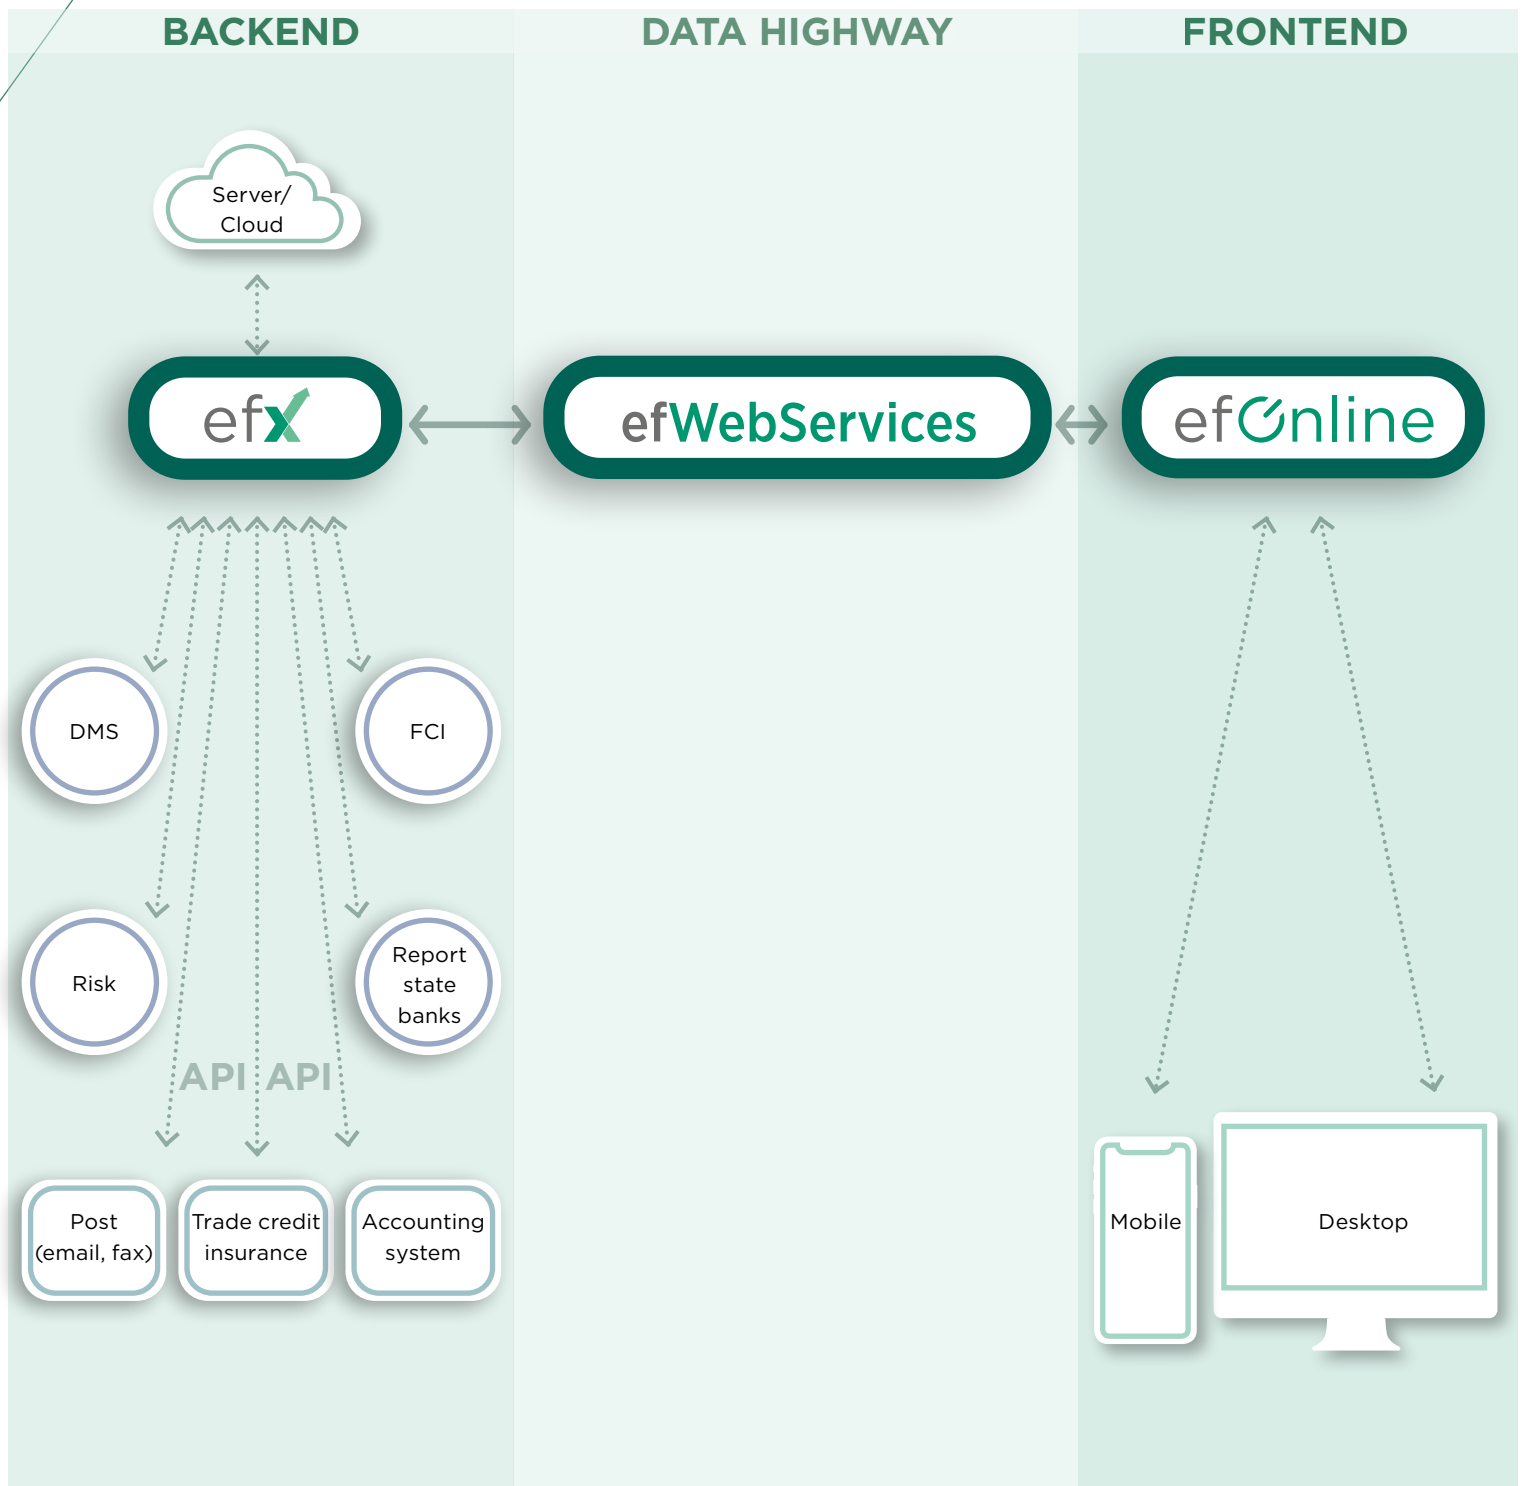

## 2 Cloud: accessibility & security

Our SaaS solution offers you real-time access to all data—from anywhere, at any time and from all devices. In addition, we offer you the highest level of security, including the use of high performance data centres in your local area.

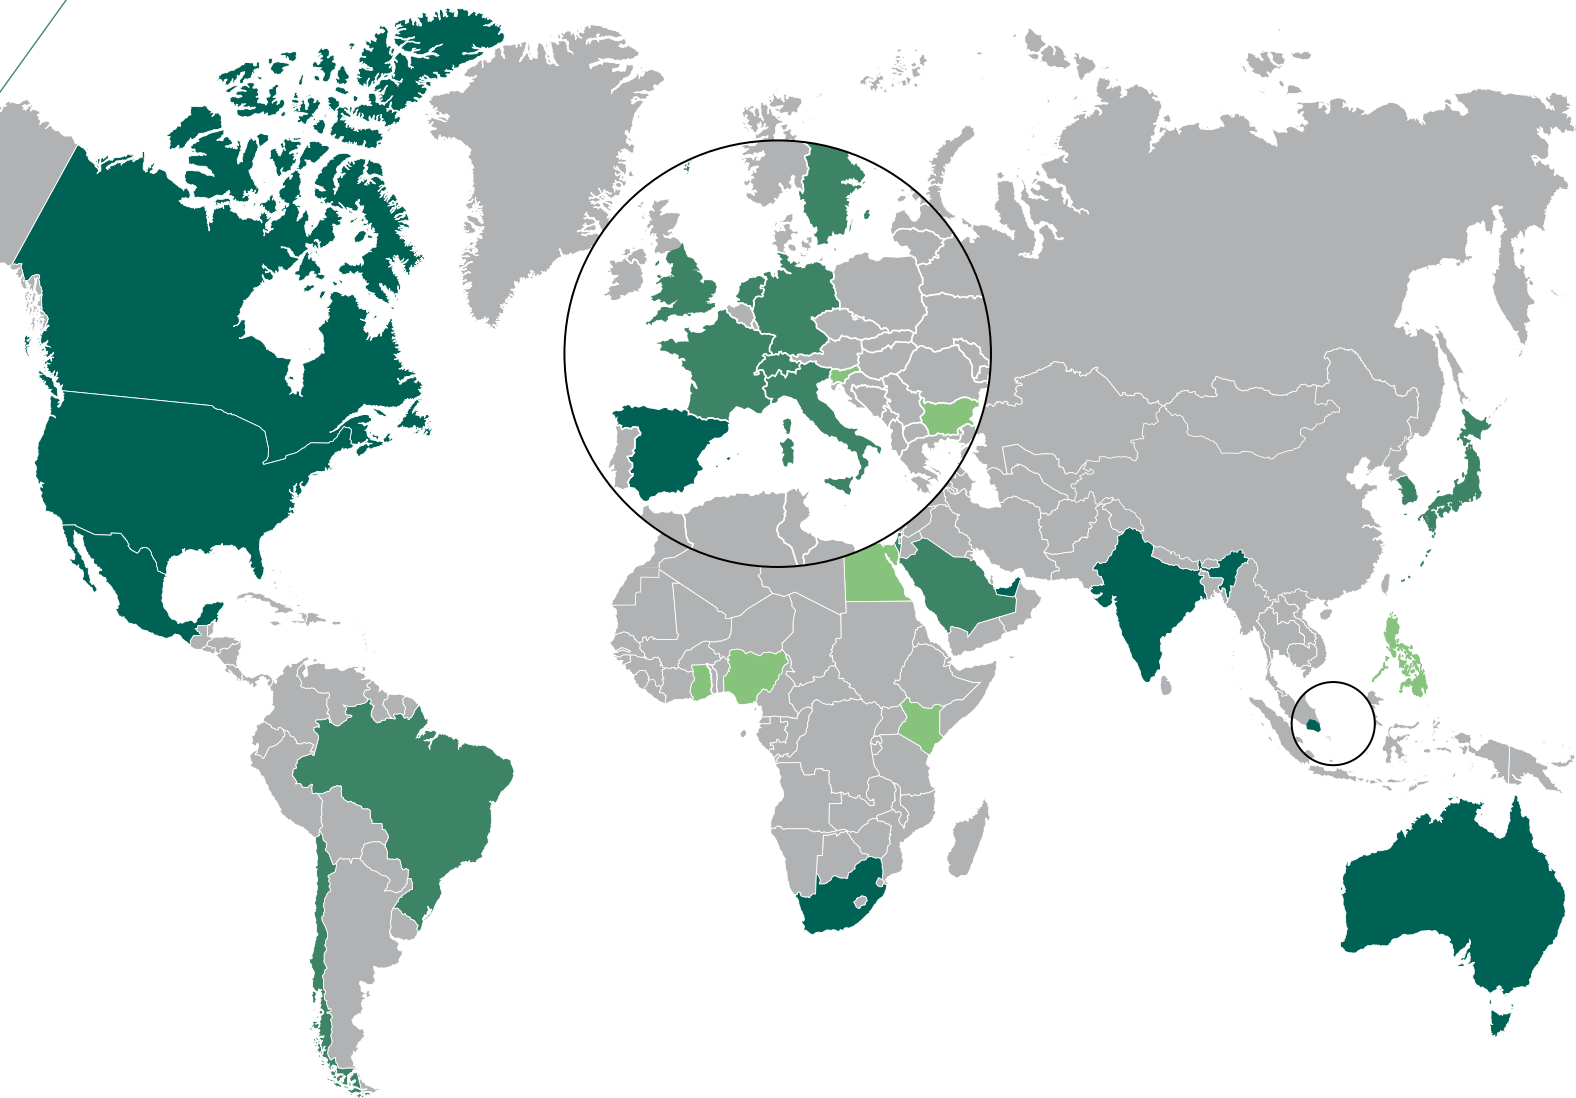

## 5 Reliability

You benefit from solutions that have been thought out down to the last detail and innovative ideas, made in Germany. Furthermore, it is also about the certainty that our solution works absolutely reliably even under stress.

Wherever you want  
to do factoring business:  
We make it possible.

Our global network of available Oracle Cloud (OCI) hubs as well as regional partners.

# Our workflow is efficient, your time-to-market is short.

In project management we offer you maximum transparency and a structured approach. Whether you opt for the traditional or a fast track approach is up to you.

## 1. Training

**We train key users at the start of the project, followed by all end users after the development phase.** Key users receive training on a range of overarching topics, while end users receive targeted training depending on their role and daily activities.

## 2. Installation

**Now it's time for installation at your location.** We first establish if the customisations meet your requirements fully. Our experts will assist you with this, as only they can.

## 3. Consulting

**We analyse the current situation in your business.** Your individual needs are clarified in dedicated workshops and the objective defined together.

## 4. Migration

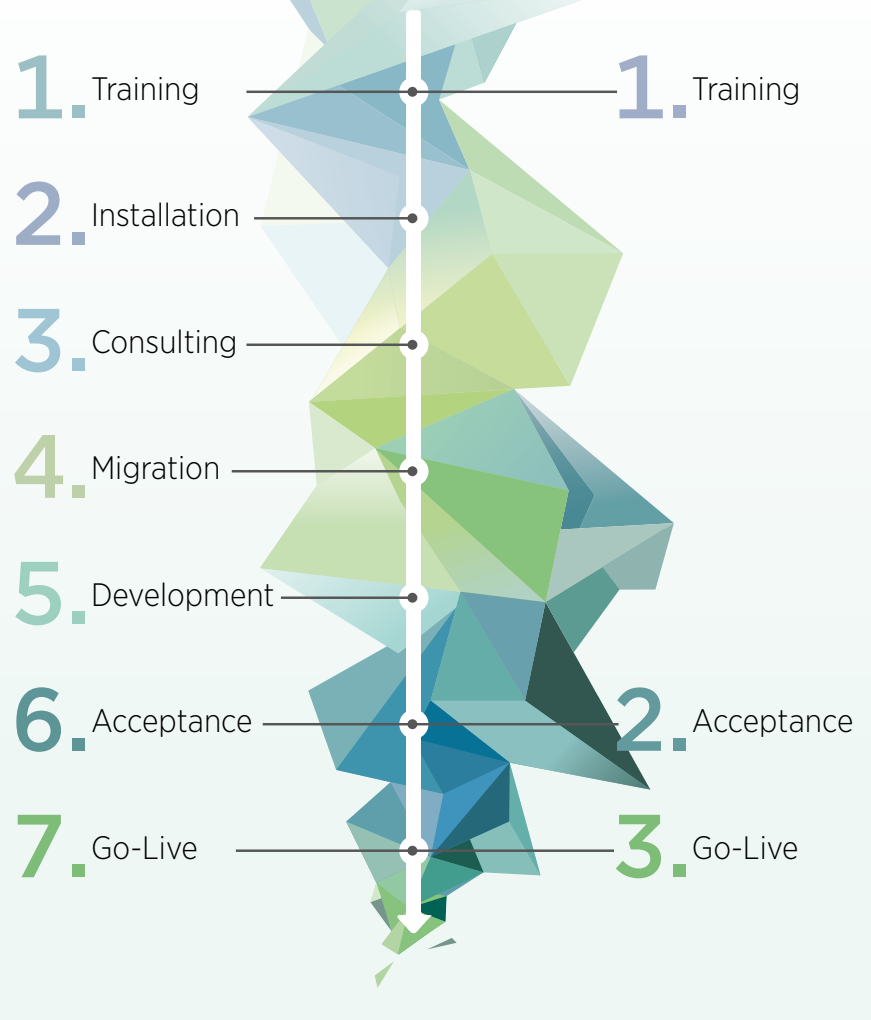

**Which data is to be migrated? We agree on this in advance together.** There then follow at least two test migrations, each of which you accept individually. In this phase, the old and new systems run in parallel. If all tests are completed successfully, full migration takes place.

## 5. Development

**This is where our development team steps in.** It carefully implements the set requirements. The team also provides interim releases for your acceptance—providing the flexibility to account for any changes you may like to make.

### TRADITIONAL

### FAST TRACK

## 6. Acceptance

**During our testing and acceptance phase, you can rely 100% on the many years of project know-how of our employees.**

## 7. Go-Live

**Now it's time to finally put your new system into operation.** If you like, we'll be happy to support you on site. That's it—say hello to your new solution! But what happens now? We're still here to provide help and advice as and when you need it—hopefully as part of a long-term business relationship.
